PET/CT IMAGING REPORT

Patient:	Robert Hawkins
DOB:	1971-11-03
MRN:	ROBERT_H
Exam Date:	2026-01-15
Ordering Physician:	Dr. Kevin Patel
Procedure:	PET/CT Restaging
Indication:	Relapsed Refractory

TECHNIQUE

F-18 FDG PET/CT performed from skull base to mid-thigh following standard preparation (fasting >6 hours, blood glucose verified <200 mg/dL). Approximately 10-12 mCi F-18 FDG administered intravenously with 60-minute uptake time. Low-dose CT acquired for attenuation correction and anatomic localization. Images reviewed on dedicated PET/CT workstation.

FINDINGS

Progressive disease with new hepatic (2.3 cm, SUV 12.4) and splenic lesions. Persistent bilateral inguinal lymphadenopathy. Deauville 5.

IMPRESSION

Progressive disease with new hepatic (2.3 cm, SUV 12.4) and splenic lesions. Persistent bilateral inguinal lymphadenopathy. Deauville 5.
